Substitute values. Note that **k** constants belong to the object, and **i** constants belong to the light. The **I** to the left means color Intensity for each channel.

● $I = (0.0 * 1.0(\hat{l} \cdot \hat{n})) + (0.0 * 1.0 * (\hat{v} \cdot \hat{r})^\alpha) + (0.0 * 0.01)$

● $I = (0.0 * 1.0(\hat{l} \cdot \hat{n})) + (0.0 * 1.0 * (\hat{v} \cdot \hat{r})^\alpha) + (0.0 * 0.01)$

● $I = (1.0 * 1.0(\hat{l} \cdot \hat{n})) + (0.5 * 1.0 * (\hat{v} \cdot \hat{r})^\alpha) + (0.1 * 0.01)$

$$\bar{l} = B - A = (1, 7, 0) - (3, 4, 0) = (-2, 3, 0)$$

$$\hat{l} = \left(\frac{-2}{\sqrt{13}}, \frac{3}{\sqrt{13}}, 0 \right) \approx (-0.555, 0.832, 0)$$

$$\hat{l} \cdot \hat{n} = (-0.555, 0.832, 0) \cdot (0, 1, 0) = 0.832$$

$$\hat{l} \cdot \hat{n} = \mathbf{0.832}$$

What do the different vector “hats” mean?

We are looking for $\bar{u}_{reflected}$ from \bar{u} .

Define vectors $\bar{u}_{parallel}$ and $\bar{u}_{orthogonal}$

$$1) \bar{u}_{parallel} = \bar{n}(\bar{n} \cdot \bar{u})$$

$$2) \bar{u}_{orthogonal} = \bar{u} - \bar{u}_{parallel}$$

$$3) \bar{u}_{reflected} = \bar{u}_{parallel} - \bar{u}_{orthogonal}$$
